BOTTLENECKIQ EXECUTIVE REPORT

Warehouse bottleneck executive summary

A concise view of the lead bottleneck, the evidence behind it, pressure across inbound and outbound flow, the bottleneck over time, and the monthly value unlocked by improvement.

PRIMARY BOTTLENECK

Picking

Most likely primary bottleneck across the day.

Micro bottleneck: P24 (Micro Score: 0.375, Confidence: Medium)

PRIMARY BOTTLENECK SCORE	GAP TO NEXT CANDIDATE
0.961	0.601

Reliability breakdown

How confident the model is in the bottleneck call, based on workload volume, order flow quality, window coverage, day-long consistency, and whether total warehouse output tends to slow down after this step becomes the bottleneck.

OVERALL RELIABILITY	High
TASK VOLUME	High (185 avg tasks/window)
ORDER FLOW QUALITY	High (1.00) - HIGH-flow
TIME COVERAGE	High (19/20)
CONSISTENCY	High (100%)
WAREHOUSE OUTPUT FOLLOW-THROUGH	Mixed (4/18 supporting windows)

Why Picking was flagged

The strongest operational signals behind the bottleneck decision.

- Tasks wait longer before work starts in Picking.
- The slowest Picking tasks take materially longer than the norm.
- Picking is running close to full capacity.
- Work tends to build up ahead of Picking.
- Model estimate: improving this step could lift total output by about 2%.

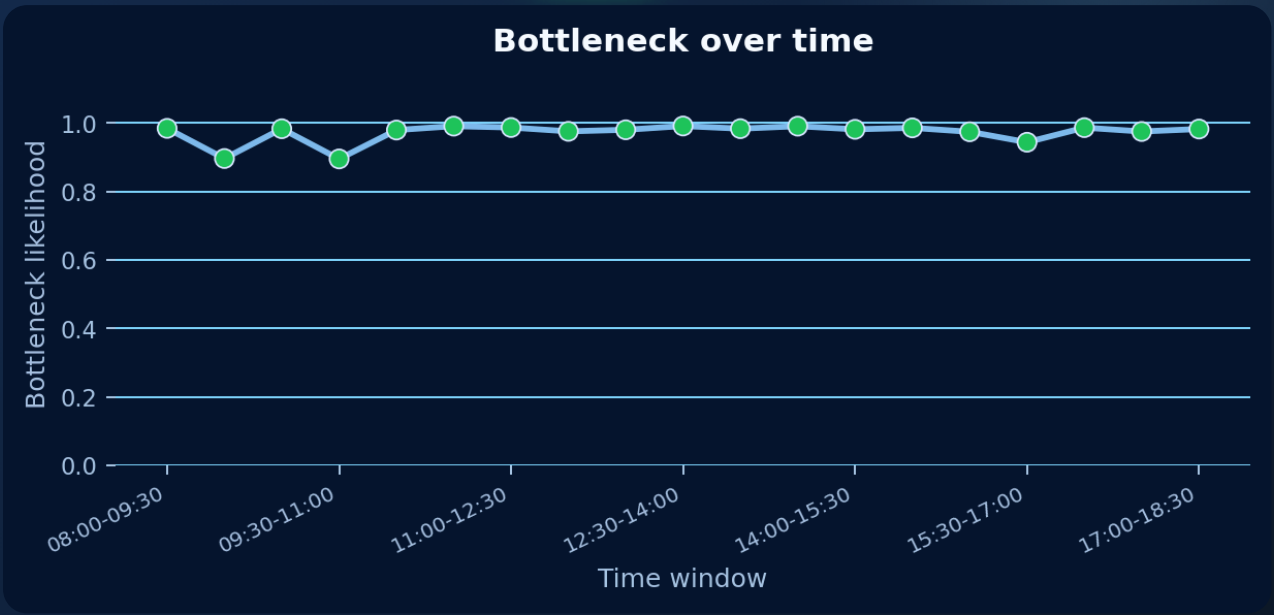
Bottleneck over time

Dominant timeline signal: Picking | windows with decision: 19/20

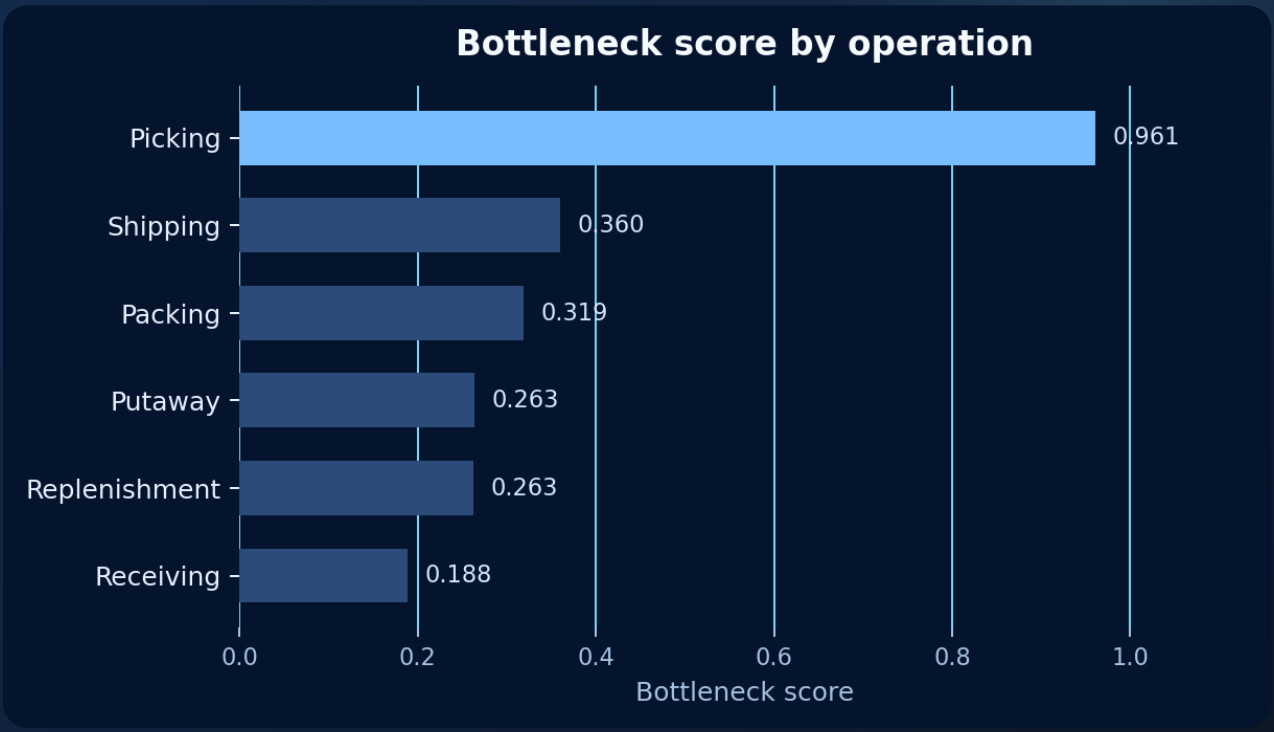
Receiving · Putaway · Replenishment · **Picking** · Packing · Shipping



The time-sliced view supports the daily bottleneck decision.

Bottleneck score by operation

The highlighted bar shows the current lead bottleneck across the uploaded operations.



ROI

Workforce efficiency

469 EUR

Estimated monthly impact if **Picking** is improved.

INPUTS USED FOR THIS ROI

TEAM HOURS / MONTH	LABOR RATE / HOUR
1,600.0	**15.00 EUR**

HOURS RELEASED / MONTH	EXTRA UNITS / MONTH
31.3	**100**

EXPECTED RANGE	EXPECTED CAPACITY GAIN	BOTTLENECK CONFIDENCE
354 EUR to 509 EUR / month	**2.0%**	**High**

This ROI view turns released team capacity into labor value using the loaded hourly rate.
